

Partners and SDKs Notice

Effective date: 22 May 2026
Application: WordWildWest
Service Provider: BAD DUCK STUDIO, LDA
Contact: **contact@badduckstudio.com**

This Notice explains the main third-party services and SDKs that may be used in WordWildWest. The final app build, mediation configuration and platform settings determine which partners are active for a particular user, region, device and consent choice.

Provider	Purpose	Possible data	Controls
Google AdMob / Google	Ads, rewarded ads, ad measurement, fraud prevention, consent tools.	Advertising ID, device data, IP address, approximate location, ad events, consent signals.	Google UMP / CMP, device ad settings, non-personalised ads where available.
Unity LevelPlay / Unity Ads	Ad mediation, ad delivery, rewarded and interstitial ads, measurement.	Advertising ID, device data, IP address, ad events, app interaction data, consent flags.	Consent and privacy flags passed through SDK configuration; device ad settings.
AppLovin, if enabled in the final configuration	Mediated ads, ad delivery, measurement and fraud prevention.	Advertising ID, device data, IP address, ad events, approximate location, privacy flags.	SDK privacy flags, consent/opt-out signals, device ad settings.
PlayFab / Microsoft	Guest login, authentication, cloud saves, player data, leaderboards, purchase validation, account deletion.	PlayFab ID, authentication method, display name, gameplay progress, scores, inventory, purchase validation data.	Account settings, delete account flow, support/privacy requests.
Google Play Services /	Platform login, achievements, leaderboards, purchases,	Google account/platform ID, game profile, achievements,	Google account settings, Google Play

Provider	Purpose	Possible data	Controls
Google Play Games	app integrity and platform services.	purchase and device signals.	settings, app permissions.
Apple App Store / Game Center / Sign in with Apple	Platform login, app distribution, purchases, Game Center, device and privacy controls.	Apple account/platform ID, Game Center profile, purchase data, device signals.	iOS privacy settings, App Tracking Transparency, Apple account settings.
Unity IAP and app-store payment systems	In-app purchases, entitlement validation, restore purchases, refund handling.	Purchase token, product ID, transaction status, entitlement information.	App-store purchase history, refund process restore purchases.

Our responsibilities

We are responsible for choosing SDKs carefully, configuring them according to applicable law and platform policies, describing them in our legal documents, passing consent and privacy signals where required, and providing users with available controls. Providers remain responsible for their own services, policies and processing activities to the extent required by law.

Consent signal handling

Where consent is required, the Application should collect consent before non-essential SDKs run and should pass the resulting consent or opt-out signals to advertising and analytics partners. If a user withdraws consent, the Application should update partner SDKs and avoid using non-essential processing for that user except where allowed by law.

Build verification

Before release, the active SDK list in this Notice should be compared with the final Unity project, mediation dashboard, AdMob configuration, app store data safety declarations and PlayFab configuration. Any SDK not used in the final build should be removed from this Notice, and any SDK used in the final build should be added here before publication.
