

Cookie and Similar Technologies Policy

Effective date: 22 May 2026

Application: WordWildWest

Service Provider: BAD DUCK STUDIO, LDA

Contact: contact@badduckstudio.com

1. Introduction

This Cookie and Similar Technologies Policy explains how WordWildWest uses cookies, software development kits, advertising identifiers, device identifiers, local storage, pixels, tags and similar technologies (together, "Technologies").

Although the Application is a mobile app and may not use traditional browser cookies in the same way as a website, it may use similar technologies through mobile SDKs, app stores, analytics tools, advertising partners, backend services and device-level identifiers.

This Policy should be read together with our Privacy Policy and Terms and Conditions.

2. Technologies used in the Application

The Application and its partners may use the following Technologies:

- SDKs: code provided by third-party services integrated into the Application, including advertising, analytics, backend, authentication and app store SDKs;
- advertising identifiers: device advertising IDs such as Android Advertising ID or Apple IDFA, where available and permitted;
- device identifiers: technical identifiers used for operation, security, diagnostics, analytics, fraud prevention or ad delivery;
- local storage: information stored on your device to remember settings, progress, preferences, save data or consent choices;
- analytics and performance technologies: tools that help us understand app performance, crashes, usage and technical issues;
- advertising technologies: tools used to deliver, limit, measure or personalise ads;
- security and fraud prevention technologies: tools used to detect misuse, cheating, fraud, unauthorised activity or invalid ad traffic.

3. Why we use these Technologies

3.1 Strictly necessary Technologies

These are required for the Application to function correctly, provide requested features, maintain security, remember essential settings, authenticate users, enable purchases, support cloud saves, prevent fraud and keep the service operational.

These Technologies do not usually require consent, but they are described in this Policy for transparency.

3.2 Preferences

These Technologies remember choices such as language, region, audio settings, gameplay settings, accessibility preferences and consent choices.

3.3 Analytics and performance

These Technologies help us understand how the Application is used, diagnose crashes, improve performance, fix bugs, test features and optimise the user experience.

Where analytics are not strictly necessary, we will request consent where required by applicable law.

3.4 Advertising and ad measurement

The Application displays advertisements, including interstitial advertisements and rewarded advertisements. Advertising Technologies help display ads, limit how often you see the same ad, measure ad performance, detect fraud, prevent invalid traffic and report aggregate advertising results.

The Application may use Unity LevelPlay and mediated advertising networks such as Unity Ads, AdMob and AppLovin. These providers may process technical information, advertising identifiers, IP address, device information, app interaction data and ad performance data.

Advertising may be contextual, non-personalised or personalised depending on your region, device settings, consent choices and the configuration of our advertising partners.

3.5 Personalised advertising

Personalised advertising may use information such as advertising identifiers, app activity, approximate location, device information or ad interactions to show ads that may be more relevant to you.

Where required by law, personalised advertising will only be used after obtaining your consent. If you reject personalised advertising, the Application may still show contextual or non-personalised advertisements.

3.6 Backend, authentication and cloud features

The Application may use backend and authentication Technologies, including PlayFab, Google Play Games and Apple authentication. These Technologies support guest login, account linking, cloud saves, profile features, leaderboards, player statistics, purchase validation and account deletion functionality.

4. Third-party providers

The Application may use Technologies from third-party providers, including:

- Unity LevelPlay;
- Unity Ads;
- AdMob;
- AppLovin;
- Google Play Services and Google Play Games Services;
- Apple services;
- PlayFab;
- Unity IAP;
- Microsoft services, where applicable.

These providers may collect and process information according to their own privacy policies, terms and technology policies. Their practices may include ad delivery, ad measurement, fraud prevention, analytics, diagnostics, platform functionality, authentication, cloud saves, purchase validation and account services.

You should review the policies of these providers for detailed information about their processing activities and privacy choices.

5. Consent and control

Where required by law, we will ask for your consent before using non-essential Technologies, including personalised advertising and certain analytics Technologies.

You may be offered options such as Accept all, Reject non-essential Technologies, Manage choices, or choose between personalised and non-personalised advertising.

You can withdraw or change your consent at any time through the Application settings, consent management interface, device settings or other mechanisms made available in the Application.

Withdrawing consent does not affect the lawfulness of processing based on consent before withdrawal.

6. Device and platform controls

You may be able to manage advertising and tracking choices through your device or platform settings, including:

- resetting or deleting your advertising identifier;
- limiting ad personalisation;
- disabling app tracking permissions;
- managing privacy settings in iOS or Android;
- managing Google or Apple account privacy settings;
- using privacy controls offered by advertising partners.

The exact controls available to you depend on your device, operating system, app store, region and account settings.

7. Consequences of disabling Technologies

If you reject or disable non-essential Technologies, you should still be able to use the core Application, but some features may be limited, less personalised or less reliable.

If you disable strictly necessary Technologies, certain features may not work properly, such as account login, cloud saves, purchases, security, fraud prevention, leaderboards or essential gameplay functionality.

8. Retention

The retention period for information collected through Technologies depends on the purpose and the provider involved.

- session or local functionality data may remain only while needed for the session or feature;
- preference and consent data may be stored until changed, reset or deleted by you;
- analytics and diagnostics data may be retained for a limited period needed for app improvement and troubleshooting;
- advertising and consent records may be retained as necessary to respect your choices, prevent fraud and demonstrate compliance;
- cloud save, account and leaderboard data may be retained while your account remains active or as needed to provide the relevant features;
- data may be anonymised or aggregated and retained for longer where it no longer identifies you.

Specific retention periods may also be determined by third-party providers according to their own policies.

9. International transfers

Some third-party providers may process information in countries outside your country of residence. Where required by applicable law, appropriate transfer safeguards will be used.

More information is available in our Privacy Policy.

10. Updates to this Policy

We may update this Cookie and Similar Technologies Policy from time to time. When we do, we will update the effective date and make the revised version available through the Application, website or app store listing.

For material changes affecting consent-based Technologies, we will request renewed consent where required by law.

11. Contact us
